DETAILED ACTION

Allowable Subject Matter

1. Claims 1-64 are allowable over the prior art of record.

2. The following is an examiner's statement of reasons for allowance:

As per independent claims 1,28,33,60, the recited limitations pertaining to combining the residual signal with a first noise feedback signal and predictively quantizing the predictive quantizer input signal is not explicitly taught by the prior art of record. Furthermore, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of the prior art of record to obtain the recited limitations of the independent claims as noted above. With respect to the prior art of record, Bhaskar (5487086) teaches a method of predictive coding (col. 4 lines 10-21) using residual predicting (col. 4 lines 10-16), as well as disclosing older well known noise feedback systems (col. 2 lines 55-67, Fig. 1; i.e., noise feedback systems are indeed old and well known in the art); however, Bhaskar teaches an "open loop" codec structure that is specifically designed to avoid the use of a noise feedback loop or noise feedback signal. Moreover, none of the structures described in Bhaskar's codec, alone or in combination with each other, perform the step of combining the residual signal with a first noise feedback signal to produce a predictive quantizer input signal in the independent claims.
